

Create and Setup a Website in 10 mins

Deepesh Divakaran
www.deepeshmd.com

1. Go to www.byethost.com and register a Free Hosting account

The screenshot shows the homepage of Byet Internet Services. At the top, there is a navigation menu with links for Home, Free Hosting, Paid Hosting, Resellers, and Servers. A 'Member Login here' button is located in the top right corner. The main banner features a large orange background with the text 'Get you own free web hosting account today!' and a 'Not a member? Sign Up NOW!' button. Below the banner, there are four service tiles: 'Dedicated Servers' (featuring Intel Xeon), 'Paid Hosting Reseller' (featuring cPanel WHM), 'Premium Hosting' (featuring Fantastico), and 'Free Hosting'. A 'Main Menu' sidebar on the right lists various site sections like Home, About, Contact / Support, and Community Forums.

• CDM advocate for publishers

2. Once Registered, Go to www.co.cc and then register a Free Domain (Personal Use)

The screenshot shows the www.co.cc website interface. At the top, there is a navigation bar with the logo "CO.CC" and the text "Free Choose a domain name". To the right, there are social media share icons and a language dropdown menu set to "English". Below the navigation bar, there is a black menu with white text: "Domain Settings | Getting A New Domain | Users' Webs | Free WebHosting | Referrals | FAQ". The main content area has a sub-header "Domain Settings | Update Your Account and Domain". Underneath, there is a "Manage Domain" section with a "Total Count : 2" and a "CC.CC Domain list" button. A table lists the domains:

No	↑ Date ↓	↑ Domain ↓	Service Type	Status
1	2008-10-18 renewed billed by KSNET	deepeshmd.Co.CC	URL Forwarding	Examination

3. Setup the Domain Name with NAME SERVER settings.

The screenshot shows the "Update Name Servers" configuration page on www.co.cc. The page has a yellow header with the domain "deepeshmd.co.cc" and "renewed billed by KSNET (2009-06-17)". Below this, it says "Purpose of use: Personal". A green banner states: "It may take up to 48 hours for any changes to take effect in your users' accounts." The main section is titled "1. Name Server" and contains the following text: "Update Name Servers", "Advanced Service / It can be difficult", and two input fields for "Name Server 1:" and "Name Server 2:". Below the input fields is a blue link: "[+ Add More Name Servers]". At the bottom, there is a warning: "Name server changes may take up to 48 hours to update throughout the Internet. (It may take up to 48 hours for any changes to take effect in your users' accounts.)" and a "Set up" button.

4. Enter the Following Name Servers (add up to 5)

- ns1.byet.org
 - ns2.byet.org
 - ns3.byet.org
 - ns4.byet.org
 - ns5.byet.org
- The Set up at www.co.cc is now complete.

- Now login into the www.byethost.com account using the information you received in your email.
- From the Domains Menu, Click on PARKED DOMAIN

- Enter the domain you registered at www.co.cc into the box, over the existing domain name which might be something like yourname.byethost99.com

To park a domain on an existing site on your account you can use the options below, remer

Domain Name

Park on

- Once you have updated your byethost.com account, you have finally done the setup for linking the Domain name to your Web Hosting Account.
- PLEASE NOTE THAT TO GET THE LINKING, YOU WILL HAVE TO WAIT ANYWHERE BETWEEN 24-48 HRS**
- Go to Online File Manager

- Navigate to “htdocs” folder
- Click on “New File”

- Now, enter the following code into the text area, and name the file as index.html (overwrite if the file already exists.)

```
<html><body><h1>The Website is under Construction</h1></body></html>
```

14. Save the file.

15. Once your website is linked with Domain and Web hosting, you will see the message “The Website is under Construction”

You are good to upload HTML files into the “htdocs” folder using the FTP user/passwd given in the mail, or use any FTP client like Filezilla to do the uploads.

You could use any php/mysql based packages to be used on the website too. (e.g. wordpress, phpbb, 4images)
